Operating instructions

General charging guidelines

- At the same time you can charge two or four AA or AAA batteries or two AA and two AAA batteries.
- For long battery life, only charge empty batteries.
- When charging, ambient temperature should be between 0°C and 40°C (32°F and 104°F).
- Make sure batteries in each pair of slots (1/2 and/or 3/4) are identical (same capacity, and size).

Note: it is normal for the unit and the batteries to become warm while charging.

Charging batteries

- 1 Insert batteries into the charger. See fig. A. When charging only two batteries, insert them into the same pair of battery slots (1/2 or 3/4).
- 2 Plug the charger into a wall outlet. See fig. B.
 > The red charge LED(s) will illuminate, indicating that charging is in progress.
 The LED(s) will remain lit until charging is stopped manually.
- 3 When finished, unplug the charger from the power source and remove the batteries. See fig. C. Always unplug between charges!

Battery charging times: See fig. D.

Charging times are for reference only as they may differ per brand and performance of batteries as well as environmental conditions at the time of charging.
