## PRECAUTIONS

Ensure that the AC power supply in your house complies with the identification sticker located on the back of your player. Install your player horizontally, on a suitable base (furniture), with enough space around it for ventilation (7.5~10 cm). Make sure the ventilation slots are not covered. Do not stack anything on top of the player. Do not place the player on amplifiers or other equipment which may become hot. Before moving the player, ensure the disc tray is empty. This player is designed for continuous use. Switching off the DVD player to the stand-by mode does not disconnect the electrical supply. In order to disconnect the player completely from the power supply, remove the main plug from the wall outlet, especially when left unused for a long period of time.

During thunderstorms, disconnect the AC main plug from the wall outlet. Voltage peaks due to lightning could damage the unit.

Do not expose the unit to direct sunlight or other heat sources. This could lead to overheating and malfunction of the unit.

Protect the player from moisture (i.e. vases) , and excess heat (e.g.fireplace) or equipment creating strong magnetic or electric fields (i.e.speakers...). Disconnect the power cable from the AC supply if the player malfunctions. Your player is not intended for industrial use. Use of this product is for personal use only.

Condensation may occur if your player or disc has been stored in cold temperatures. If transporting the player during the winter, wait approximately 2 hours until the unit has reached room temperature before using.

The batteries used with this product contain chemicals that are harmful to the environment. Do not dispose of batteries in the general household trash.

# Getting started

**DVD (Digital Versatile Disc)** offers fantastic audio and video, thanks to Dolby Digital surround sound and MPEG-2 video compression technology. Now you can enjoy these realistic effects in the home, as if you were in a movie cinema or concert hall.

DVD players and the discs are coded by region. These regional codes must match in order for the disc to play. If the codes do not match, the disc will not play.

The Region Number for this player is given on the rear panel of the player.

(Your DVD player will only play DVDs that are labelled with identical region codes.)

# Connections

---

This section involves various methods of connecting the Digital Home Cinema to other external components. Before moving or installing the product, be sure to turn off the power and disconnect the power cord.

## CONNECTING THE SPEAKERS

---

### Position of the DVD Player

Place it on a stand or cabinet shelf.

### Selecting the Listening Position

The listening position should be located about 2.5 to 3 times the distance of the TV's screen size away from the TV.

Example : For 32" TV's 2~2.4m (6~8feet)

For 55" TV's 3.5~4m (11~13feet)

### Front Speakers **L** **R**

Place these speakers in front of your listening position, facing inwards (about 45°) toward you.

Place the speakers so that their tweeters will be at the same height as your ear.

Align the front face of the front speakers with the front face of the Centre speaker or place them slightly in front of the Centre speakers.

### Centre Speaker **C**

It is best to install it at the same height as the front speakers. You can also install it directly over or under the TV.

### Rear Speakers **SL** **SR**

Place these speakers behind your listening position. If there isn't enough room, place these speakers so they face each other. Place them about 60 to 90cm (2 to 3feet) above your ear, facing slightly downward.

\* Unlike the front and Centre speakers, the rear speakers are used to handle mainly sound effects and sound will not come from them all the time.

### Subwoofer **LFE**

The position of the subwoofer is not so critical. Place it anywhere you like.

## Connecting the Front, Rear, Centre and Subwoofer Speakers

1. Press down the terminal tab on the back of the speaker.
2. Insert the black wire into the black terminal (-) and the red wire into the red terminal(+), and then release the tab.
3. Connect the other end of the speaker cable to the connecting jacks on the back of the Home Theatre.
  - Make sure the colors of the speaker terminals match the speaker wire.

- ! Do not let children play with or near the speakers. They could get hurt if a speaker falls.
- When connecting the speaker wires to the speakers, make sure that the polarity (+/-) is correct.
- Keep the subwoofer speaker out of reach of children so as to prevent them from inserting their hands or alien substances into the duct (hole) of the subwoofer speaker.
- Do not hang the subwoofer on a wall through the duct (hole).

- ✍ If you place a speaker near your TV set, screen colour may be distorted because of the magnetic field generated by the speaker. If this occurs, place the speaker away from your TV set.

## Front/Rear Tallboy Stand

### How to Install the Speaker on the Stand

HT-TZ122 - Front Speakers

## CONNECTING THE VIDEO OUT TO YOUR TV

## P.SCAN(PROGRESSIVE SCAN) FUNCTION

Unlike regular Interlace Scan, in which two fields of picture information alternate to create the entire picture (odd scan lines, then even scan lines), Progressive Scan uses one field of information (all lines displayed in one pass) to create a clear and detailed picture without visible scan lines.

1. Press STOP button.
  - If playing a disc, press the **STOP** button twice so that "**STOP**", appears on the display.
2. Press and hold P.SCAN button on the remote control for over 5 seconds.
  - Pressing and holding the button for over 5 seconds will select "**P.SCAN**" and "**I.SCAN**" alternately.
  - When you select P.SCAN, "**P.SCAN**" will appear on the display.
  - To set P.Scan mode for DivX discs, press the **P.SCAN** button on the remote control for more than 5 seconds with no disc in the unit ("NO DISC" on the display), then load the DivX disc and play.

### What is Progressive (or Non-Interlaced) Scanning?

| Interlaced Scan (1 FRAME = 2 FIELDS)  | Progressive Scan (FULL FRAME)  |
|---|--|
|  <p>In interlaced-scan video, a frame consists of two interlaced fields (odd and even), where each field contains every other horizontal line in the frame. The odd field of alternating lines is displayed first, and then the even field is displayed to fill in the alternating gaps left by the odd field to form a single frame. One frame, displayed every 1/30th of a second, contains two interlaced fields, thus a total of 60 fields are displayed every 1/60th of a second. The interlaced scanning method is intended for capturing a still object.</p> |  <p>The progressive scanning method scans one full frame of video consecutively down the screen, line by line. An entire image is drawn at one time, as opposed to the interlaced scanning process by which a video image is drawn in a series of passes. The progressive scanning method is desirable for dealing with moving objects.</p> |

- Depending on the capabilities of your TV, this function may not work.
