Permeable Supports Product Selection Guide

Including Transwell® and Falcon® Cell Culture Inserts

CORNING

About Corning® Permeable Supports

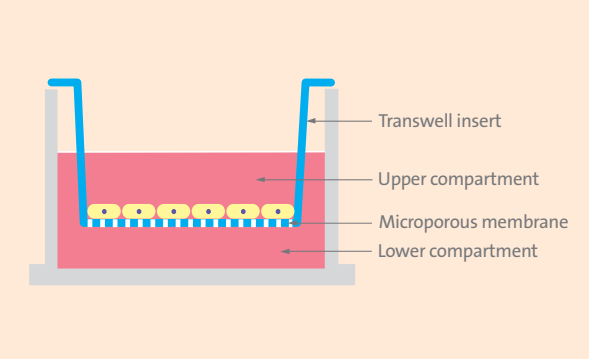
Permeable supports, also known as cell culture inserts, are an essential tool for the study of both anchorage-dependent and independent cell lines.

You can use cell culture inserts to:

- Produce a cell culture environment that closely resembles an *in vivo* state
- Allow polarized cells to carry out metabolic activities in a more natural manner because the cells feed both apically and basolaterally
- Co-culture cells with or without cell-to-cell contact
- Design a diversity of experiments using various pore sizes, membrane types, and coatings

This selection guide will help you choose the right combination of membrane type, pore size, format, and surface treatment to create a cell culture environment that more closely mimics the *in vivo* environment you desire.

Create a More Natural Environment for Your Cells



The unique, self-centered hanging design of Transwell inserts prevents medium wicking between the insert and outer well. The design also permits access to the lower compartment through windows in the insert wall, as well as undamaged co-culturing of cells in the lower compartment.

Transwell® Permeable Supports: a Laboratory Standard

Transwell inserts are convenient, ready-to-use permeable support devices pre-packaged in standard multiple well plates. The unique, self-centered hanging design prevents medium wicking between the insert and outer well. Transwell inserts are available in a wide variety of sizes, membrane types, and configurations, and they are backed by extensive citations, protocols, and technical support—all of which has helped to make them the leading brand of cell culture insert for more than 25 years.

Falcon® and Corning® BioCoat™ Inserts: Giving You More Choices

With Falcon and BioCoat inserts, Corning offers an even broader line of permeable support research tools, including Corning FluoroBlok™ light-blocking inserts and systems for migration assays, as well as BioCoat ECM-coated inserts for enhanced cell attachment, growth, and differentiation.

Falcon inserts are offered in polyester (PET) membranes and come individually packaged in a variety of pore sizes and configurations. For best results, Falcon, BioCoat, and FluoroBlok inserts should be used only with Falcon cell culture companion plates. These plates allow for a two-position orientation of the inserts for feeding and incubation of cells.

How to Use this Guide

Follow these four steps to select the optimal insert for your research.

1. Select a Membrane

Permeable supports are available with three materials of construction:

PC (Polycarbonate)

Transwell® permeable supports are available in a broad range of pore sizes from 0.4 to 8.0 µm. This high pore density membrane is suitable for a variety of applications. It allows for maximum diffusion when studying transport, secretions, or drug uptake.

PET (Polyester or Polyethylene Terephthalate)

Several PET membrane types are available:

- Transwell-clear and Falcon® transparent PET inserts permit sufficient optical transparency for visualization of cell outlines by phase contrast microscopy.
- Falcon high density (HD) PET membranes have a high pore density, which allows maximum diffusion of materials between the insert and receiver plate.
- Corning FluoroBlok™ light-blocking PET membrane is also available for simplified cell-based assays. This unique membrane blocks >99% of light transmission from 400 to 700 nm and is ideal for both endpoint and kinetic cell invasion, migration, and chemotaxis assays.

PTFE (Polytetrafluoroethylene)

Collagen-coated PTFE membranes are available in limited pore sizes (0.4 and 3.0 µm). These coated membranes promote cell attachment and allow cells to be visualized during culture.

Consult the product specification tables on the following pages for more information.

2. Select a Pore Size

In general, smaller pore sizes (0.4 and 1.0 µm) are used for culturing cells, co-culture applications, and drug transport studies. Larger pore sizes (3.0 to 8.0 µm) are recommended for chemotaxis and angiogenesis applications. Please refer to the Applications guide below for more information.

Application	Cell Type	Pore Size (µm)
Angiogenesis	Endothelial, HMVEC, HUVEC	3.0
Co-culture	Stem, neuronal, and various others	0.4, 1.0
Epithelial Cell Polarity	Epithelial cells	0.4
Migration	Endothelial, HUVEC, HMVEC Neutrophils, PMNs Lymphocytes, macrophages, monocytes Neuronal cells Dendritic cells Neurite outgrowth Epithelial fibroblasts Leukocytes Smooth muscle	3.0 3.0 3.0, 5.0 3.0 3.0, 5.0, 8.0 1.0, 3.0 8.0 3.0, 5.0 8.0
Invasion	Melanoma Glioma Lymphoma, Jurkat Osteoblasts Breast cancer Endothelial	8.0 8.0 5.0, 8.0 8.0 5.0, 8.0 3.0, 5.0, 8.0
Tissue Engineering/Air-Liquid Interface	Human skin model: Airway epithelial cells, disease model (e.g., COVID-19)	0.4, 3.0
Toxicity Testing	Mouse fibroblasts Human lung	3.0 0.4
Organoid	Kidney	0.4
Transport and Permeability Studies	Caco-2 MDCK	0.4, 1.0 0.4, 1.0

3. Select a Format

- Individual inserts are used with 6-, 12-, and 24-well plates. A large, single-well format is also available in a 100 mm dish.
- HTS insert plates are available in either 24- or 96-well formats with special receiver plates and single-well reservoirs to facilitate automation and ease of handling.
- Snapwell™ inserts are designed for use with diffusion or Ussing chambers.
- Netwell™ inserts are used as tissue carriers or explants at the air-media interface. The inserts are available in 6- or 12-well plates.

Growth Area Guide for Transwell® Inserts

Insert Diameter (mm)*	Multiple Well Plate or Dish Style	Insert Membrane Growth Area (cm^2)
4.26	96-well	0.143
6.5	24-well	0.33
12	12-well	1.12
24	6-well	4.67
75	100 mm dish	44

Growth Area Guide for Falcon®, Corning® FluoroBlok™, and Corning BioCoat™ Inserts

Insert Diameter (mm)*	Multiple Well Plate or Dish Style	Insert Membrane Growth Area (cm^2)
3.2	96-well	0.08
6.4	24-well	0.31/0.33**
10.5	12-well	0.90
23.1	6-well	4.2

*Values are reported as nominal and may vary due to inherent variability of our manufacturing process. To ensure success, we recommend that researchers validate their methods independent from our reported values.
**24 HTS Multiwell

4. Select a Surface Treatment

For many applications, an extracellular matrix (ECM) coating can improve cell attachment, differentiation, and signaling. Compared to self-coated inserts, pre-coated Corning BioCoat inserts reduce handling steps and can enhance data reproducibility. Consult the BioCoat insert selection guide for more information. Custom coatings and configurations are also available. If you don't see what you need, please contact Corning for more information. You'll find contact information on the back cover of this brochure.

Individual Inserts

24 and 6.5 mm Transwell inserts

Corning offers four types of individual inserts:

- Transwell® Polycarbonate (PC) translucent inserts are treated for optimal cell attachment. They are available in a variety of pore sizes ranging from 0.4 to 8.0 µm.
- Transwell-clear inserts feature a microscopically transparent polyester (PET) membrane that is tissue culture (TC)-treated for optimal cell attachment and growth. Transwell-Clear inserts provide better cell visibility under phase contrast microscopy and allow assessment of cell viability and monolayer formation.
- Individual Falcon® inserts are available with standard transparent PET, as well as high pore-density translucent PET for maximum diffusion when studying transport, secreation, and drug uptake.
- Light-blocking PET (see Corning® FluoroBlok™ Inserts for more information).

For best results, Falcon cell culture and Corning BioCoat inserts should be used together with Falcon cell culture companion plates. Falcon cell culture insert companion plates have been specially designed to reduce the risk of evaporation or contamination due to improper fit. (See ordering information).

Individual Inserts (continued)

Corning FluoroBlok 6.5 mm insert

Corning® FluoroBlok™ Inserts

Corning FluoroBlok cell culture inserts are designed with a light-tight PET membrane that efficiently blocks the transmission of light from 400 to 700 nm, allowing fluorescence detection in a simplified and non-destructive manner.

Fluorescently labeled cells in the top chamber of the insert are shielded from bottom-reading fluorescence plate readers and microscopes by the FluoroBlok membrane. Labeled cells that migrate through the membrane are easily detected by a bottom-reading fluorescence plate reader, thereby eliminating cell scraping and manual cell counting. This non-destructive detection method enables both kinetic and endpoint chemotactic assays. (**NOTE:** Falcon® inserts do not come with companion receiver plates. See the ordering information for companion plate catalog numbers.)

Polycarbonate Snapwell inserts

Snapwell™ Inserts

The Snapwell insert is a modified Transwell® culture insert that contains a 12 mm diameter tissue culture-treated membrane supported by a detachable ring. The inserts are primarily used for transport and electrophysiological studies. Once cells are grown to confluence, this ring-supported membrane can be placed into either vertical or horizontal diffusion or Ussing chambers.

Polyester Snapwell inserts

Netwell™ Inserts

Netwell inserts have polyester (PET) mesh bottoms attached to a polystyrene ring or housing. They are used as tissue carriers, supports and strainers for culture of small organs, tissue slices, or explants at the air-media interface. They can be used to coarse filter tissue homogenates, cell suspensions, or microcarriers. Accessories allow them to be used as a handy carrier for immunocytochemical staining of tissue culture slices. See the ordering information for Netwell accessories.

ECM Coated Inserts

Corning® BioCoat™ cell culture inserts are pre-coated with extracellular matrix proteins for applications requiring a protein-coated cell surface, such as cell differentiation, migration and invasion assays. Coatings include Corning Matrigel® matrix, Fibronectin, or Collagen.

For example, cell culture inserts coated with Fibrillar Collagen I can establish the barrier function of intestinal epithelial cell monolayers (Caco-2). Inserts coated with Matrigel matrix are frequently cited for *in vitro* cell invasion assays.

Transwell-COL inserts have a transparent (when wet) collagen-treated PTFE membrane that promotes cell attachment and spreading, while allowing cells to be visualized during culture. The coating process covers each fibril of the matrix, thereby retaining the porosity of the membrane.

HTS Insert Plates

HTS insert plates are arrays of individual cell culture inserts connected by a rigid, robotics-friendly holder. This single-unit design makes insert plates ideal for running automated, high throughput drug transport (Caco-2 cells) cell toxicity studies or cell migration and invasion studies.

[a] Angiogenesis cell migration system: Use to evaluate endothelial cell invasion using real-time fluorescence detection in a simplified and reproducible manner. Increase screening throughput for prospective pro- and anti-angiogenic compounds. Tested for its ability to allow invasion of HUVEC cells in response to VEGF. This system consists of a receiver plate, a lid, and a Falcon multiwell insert plate with 3.0 µm Corning FluoroBlok membrane coated with human Fibronectin.

[b] Angiogenesis cell invasion system: A quantitative and reproducible *in vitro* model system for examining the effects of prospective compounds on endothelial cell migration. Tested for its ability to allow invasion of HMVEC-1 cells and to exclude invasion of NIH-3T3 cells. This system consists of a receiver plate, a lid, and a Falcon multiwell insert plate with 3.0 µm FluoroBlok membrane coated with Matrigel matrix.

[c] Tumor cell invasion system: An *in vitro* system for the study of cell invasion through a basement membrane. The system consists of Falcon inserts containing an 8 um pore size PET membrane coated with a uniform layer of Matrigel matrix.

3391	HTS Transwell-96 system, reservoir and receiver plates with 2 lids, PC	4.21	0.143	0.4	5	5
7369	HTS Transwell-96 System reservoir and receiver plates with 2 lids, PET	4.21	0.143	0.4	5	5
3380	HTS Transwell-96 system, reservoir and receiver plates with 2 lids, PET	4.21	0.143	1.0	1	1
3392	HTS Transwell-96 system, reservoir and receiver plates with 2 lids, PET	4.21	0.143	1.0	5	5
3385	HTS Transwell-96 well plate, receiver plate and lid, individual, PC	4.21	0.143	3.0	1	2
3386	HTS Transwell-96 well plate, receiver plate and lid, bulk, PC	4.21	0.143	3.0	4	8
3387	HTS Transwell-96 well plate, receiver plate and lid, bulk, PC	4.21	0.143	5.0	4	8
3388	HTS Transwell-96 well plate, receiver plate and lid, individual, PC	4.21	0.143	5.0	1	2
3374	HTS Transwell-96 well plate, receiver plate and lid, individual, PET	4.21	0.143	8.0	1	2
3384	HTS Transwell-96 well plate, receiver plate and lid, bulk, PET	4.21	0.143	8.0	4	8
3382	HTS Transwell-96 receiver plate with lid, standard TC-treated	–	–	–	10	10
3383	HTS Transwell-96 reservoir plate media stabilizer and lid	–	–	–	10	10
3583	HTS Transwell-96 black receiver plate with lid, standard TC-treated	–	–	–	10	10
3783	HTS Transwell-96 white receiver plate, and lid, standard TC-treated	–	–	–	10	10

Falcon® 24-well Insert Systems, PET Membrane

351181	Insert plate with feeder tray and lid	6.4	0.3	1.0	5	5
351183	Insert plate with 24-well plate and lid	6.4	0.3	3.0	5	5
351185	Insert plate with 24-well plate and lid	6.4	0.3	8.0	5	5

Falcon Plates

353047	24-well plate, standard TC-treated	–	–	–	1	50
353226	24-well plate, standard TC-treated	–	–	–	6	36
353935	24-well plate, standard TC-treated	–	–	–	10/RS Tray*	60
353847	24-well plate, Corning Primaria™ surface	–	–	–	1	50
351147	24-well plate, not treated surface	–	–	–	1	50
351186	Feeder tray with lid	–	–	–	5	5

*Ready-Stack Tray

Ordering Information (continued)

Falcon® 96-well Insert System, PET Membrane

Cat. No.	Description	Membrane Diameter (mm)	Growth Surface Area (cm^2)	Membrane Pore Size (µm)	Qty/Pk	Qty/Cs
351131	Insert plate with feeder tray and lid	3.2	0.08	1.0	5	5
353938	Insert plates with 96 square well, angled-bottom plates and lids	3.2	0.08	1.0	5	5
353925	96 square well, angled-bottom plates and lids	–	–	–	5	5
353924	96-well feeder tray and lid	–	–	–	5	5

Corning® FluoroBlok™ 24 Multiwell Insert Systems, PET Membrane

351156	Insert plate with 24-well plate and lid	6.4	0.3	3.0	5	5
351157	Insert plate with 24-well plate and lid	6.4	0.3	8.0	1	1
351158	Insert plate with 24-well plate and lid	6.4	0.3	8.0	5	5

Corning FluoroBlok 96-well Multiwell Insert Systems, PET Membrane

351161	Insert plate with 96 square well and lid	3.2	0.08	3.0	1	1
351162	Insert plate with 96 square well and lid	3.2	0.08	3.0	5	5
351163	Insert plate with 96 square well and lid	3.2	0.08	8.0	1	1
351164	Insert plate with 96 square well and lid	3.2	0.08	8.0	5	5
353928	96 square well, flat bottom plate and lid	-	-	-	5	5

Corning BioCoat™ HTS Caco-2 Assay System, PET Membrane

Contains specially formulated serum-free medium, culture supplements, sodium butyrate, and BioCoat Fibrillar Collagen 24-well insert system

354802	BioCoat HTS Caco-2 assay system	6.4	0.3	1.0	5	5

Corning BioCoat Fibrillar Collagen I 24-Multiwell Insert System, PET Membrane

354803	With feeder tray and lid	6.4	0.3	1.0	1	1
354804	With feeder tray and lid	6.4	0.3	1.0	1	5

Corning BioCoat Angiogenesis System: Endothelial Cell Migration, FluoroBlok PET Membrane, Fibronectin coated

354144	24 Multiwell insert system	6.4	0.3	3.0	5	5
354148	96 Multiwell insert system	3.2	0.08	3.0	5	5

Corning BioCoat Angiogenesis System: Endothelial Cell Invasion, FluoroBlok PET Membrane, Corning Matrigel® Matrix coated

354142	24 Multiwell insert system	6.4	0.3	3.0	5	5

Corning BioCoat (Matrigel matrix) Tumor Invasion Systems, FluoroBlok PET Membrane

354165	24 Multiwell insert system	6.4	0.3	8.0	1	1
354166	24 Multiwell insert system	6.4	0.3	8.0	5	5
354167	96 Multiwell insert system	3.2	0.08	8.0	1	1
354168	96 Multiwell insert system	3.2	0.08	8.0	1	5

Corning BioCoat Pre-coated PAMPA Plate System

353015	96-well polyvinylidene difluoride (PVDF) insert system pre-coated with structured layers of phospholipids	3.2	–	0.4	1	5

Corning Human Umbilical Vein Endothelial Cells

354151	Corning Human Umbilical Vein Endothelial Cells (>5 x 10^5 cells)	–	–	–	1	1

Corning Fluorescent Dyes

Cat. No.	Description	–	–	Size	Qty/Pk	Qty/Cs
354218	Corning DiIC12(3) fluorescent dye	–	–	100 mg	1	1
354216	Calcein AM fluorescent dye (10 x 50 µg)	–	–	50 µg	1	10
354217	Calcein AM fluorescent dye	–	–	1 mg	1	1

Corning BioCoat Angiogenesis System: Endothelial Cell Tube Formation

354149	Corning BioCoat Angiogenesis System: Endothelial Cell Tube Formation, 96-well black/clear bottom microplate	–	–	–	1	1
354150	Corning BioCoat Angiogenesis System: Endothelial Cell Tube Formation, 96-well black/clear bottom microplate	–	–	–	5	5

Additional Resources

Below is a sampling of the many resources available for permeable support users. Visit **www.corning.com/lifesciences** to access these documents, videos, and more.

Representative Technical Documents

- Human Airway Epithelial Cell Culture and COVID-19 Research (Corning App Note CLS-AN-599)
- An Novel Three-Dimensional Immune Oncology Model for High Thoroughput Testing of Tumoricidal Capability (Corning App Note CLS-AN-425)
- An Novel Three-Dimensional Glioma Blood Brain Barrier Model for High Thoroughput Testing of Tumoricidal Capability (Corning App Note CLS-AN-505)
- A Novel Spheroid-based Three-Dimensional Invasion Model for Evaluating Potentially Anti-tumor Compounds (Corning Poster CLS-PST059)
- Kidney Organoid Formation on Transwell Permeable Supports from Corning (Corning Protocol CLS-AN-556)
- Citations Summary for Transwell Permeable Supports from Corning - Studying COVID-19 at the Air-Liquid Interface (Corning Summary CLS-AN-605)
- Automated, Kinetic Imaging of Cell Migration and Invasion Assays Using Corning® FluoroBlok™ Inserts (Corning App Note CLS-DL-AC-AN-310)
- Compatible Fluorophores and Dyes for Corning FluoroBlok Inserts and Insert Systems (Corning Tech Bulletin CLS-DL-CC-077)
- Considerations when Optimizing your Chemotaxis or Invasion Assay with Corning Transwell Permeable Supports (Corning App Note CLS-AN-188)
- Design and Evaluation of an Automation-compatible Multiwell Insert for Cell-based Assay (Corning Tech Bulletin CLS-DL-CC-072)
- *In Vitro* Study of Cytokine-mediated Activation of Endothelial Cell Permeability Using Falcon® Cell Culture Permeable Supports (Corning Tech Bulletin CLS-DL-CC-068)
- Migration of Human Mesenchymal Stem Cells using Corning FluoroBlok Inserts (Corning App Note CLS-DL-CC-054)
- New PET Membrane for Corning FluoroBlok 3.0 µm and 8.0 µm Pore Size Cell Culture Inserts (Corning Tech Bulletin CLS-DL-CC-042)
- Preparation of Falcon Cell Culture Permeable Supports for Confocal Indirect Immuno-fluorescence: Fixation and Staining of Caco-2/bbe (C2) Cells with Various Dyes (Corning Tech Bulletin CLS-DL-CC-079)
- Screening of Anti-metastatic Compounds by a Fluorescence-based Tumor Cell Invasion Assay (Corning Tech Bulletin CLS-DL-CC-076)
- Use of Falcon Cell Culture Permeable Supports to Reconstruct a Differentiated Human Epidermis *In Vitro* (Corning Tech Bulletin CLS-DL-CC-066)
- ATCC® Human Bronchial/Tracheal Epithelial Cells and Falcon Permeable Supports: Improving Functional Studies (Corning App Note CLS-F-AN-328)
- Corning Matrigel Matrix-coated Transwell Permeable Supports for Enhancing Hepatocyte Differentiation from Human Embryonic Stem Cells (Corning App Note CLS-DL-AN-372)

For more specific information on claims, visit **www.corning.com/certificates.**

Warranty/Disclaimer: Unless otherwise specified, all products are for research use or general laboratory use only.* Not intended for use in diagnostic or therapeutic procedures. Not for use in humans. Corning Life Sciences makes no claims regarding the performance of these products for clinical or diagnostic applications. ***NOTE:** The following products and their sterile accessories are considered US class I medical devices: Tissue culture plates, flasks and dishes (area >100 cm^2), multilayer flasks, spinner flasks, Erlenmeyer flasks, Corning HYPER*Flask*® vessels, Corning CellSTACK® chambers, centrifuge tubes, cell culture tubes, cryogenic vials, roller bottles, microcarrier beads. Falcon IVF products are US class II and CE marked per the EU medical device directive 93/42/EEC.
